

NBA 450

SOFTENING POINT TESTER RING AND BALL METHOD

STANDARDS

ASTM D 36, ASTM E28, IP 58, EN ISO 1427, DIN 52011, AASHTO T53 and related methods.

SCOPE

This test method covers the determination of the softening point of bitumen in the range from 30 to 157°C using the ring-and-ball apparatus immersed in distilled water, silicone or glycerin. Bitumens are viscoelastic materials without sharply defined melting points; they gradually become softer and less viscous as the temperature rises.
